***Allowable Subject Matter***

Applicant's arguments filed 2/9/2007 with respect to the amended claim 1 have been fully considered and found persuasive. Therefore, claims 1-6, 8, 10-15 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claim 1 recites a safety device for protecting a worker from accidental energization or potential rise due to ground fault events of a distribution cable, comprises a main insulated gap formed between two conductors, a precision gap between said two conductors, and connected in parallel with said precision gap a surge arrester and a resistor in series, wherein said surge arrester has a voltage rating below the breakdown voltage of said precision gap whereby said surge arrester prevents said precision gap from flashing during a ground fault event up to said voltage rating, and, wherein said main insulated gap comprises the two opposed conductors electrically separated by said insulation extending into a region proximate to said precision gap, whereby when said precision gap flashes, insulation in said region is destroyed and a short circuit forms between said conductors. The references of record do not teach or suggest the aforementioned limitations, nor would it be obvious to modify those references to include such limitations.
